

BEST AMBULANCE MANUFACTURERS - REV GROUP TOPS AMBULANCE INDUSTRY

Dec. 15th, 2016

REV AMBULANCE GROUPS TOPS AMBULANCE INDUSTRY

Whether you're looking for the fastest ambulance lead times, a value-packed baseline ambulance or one of the best custom ambulance manufacturers, REV Ambulance Group offers one of the most diverse lineups, and more importantly, a portfolio of only the best ambulance manufacturers.

Here are 10 reasons REV Group tops the ambulance industry's list of manufacturers:

#1 — REPEATABLE RESULTS

REV's ambulance manufacturing facilities feature some of the industry's only CNC laser cutting and robotic welding machinery, meaning every cut and weld is made with precision to reduce variance and limit corrosion. This trusted repeatability also makes it easier than ever for municipalities and organizations to replace doors, panels and other parts down the road.

#2 — IMPRESSIVE LEAD TIMES

REV's baseline ambulance brands offer some of the industry's fastest lead times (sometimes as fast as 30 days, depending on the model) to get ambulance fleets up and running. A modular-build process plus the repeatable results above contribute to REV's efficiency. Customers can also turn to REV for turn-key stock units. Even on custom builds, you'll be impressed with REV's turnaround times.

#3 — FLAWLESS EXTERIORS

Excessive welding, bondo and sanding often causes competing ambulance exteriors to ripple, creating an unappealing end product. Many of REV's brands utilize a VHB (very high bondo) adhesive in lieu of messy welds for an aesthetic yet durable structure. And for the ultimate exterior finish, each plant has its own state-of-the-art paint facility with downdraft technology.

#4 — ISO 9001:2008 CERTIFIED

Every REV ambulance is built in an ISO 9001:2008 manufacturing facility. This stringent standard sets REV requirements for quality management, operational efficiencies and customer satisfaction. In fact, REV takes it so seriously, brands like AEV have biometric fingerprint technology to ensure only properly trained employees are operating the correct machinery.

#5 — INDUSTRY-FIRST FEATURES

With decades in the industry, many of REV's ambulance brands can point to a list of industry-first features that they've brought to the forefront. Wheeled Coach especially prides itself on this distinction with its Cool Bar cooling technology, Pure Air filtration system and Safe Pass escape mechanism. REV has also rolled out [Stealth Power idle reduction technology](#).

#6 — ADDED STRUCTURE

While competitors use .09 side skins, REV prides itself on thicker .125" exterior sheet to provide extra durability. And across the lineup, you'll find each brand fortifies its design with added structure, like front bulk heads, side-impact beams, added backer panels, chassis sill plates or a ladder sub-floor. We encourage customers to tour our facilities to appreciate these nuances.

#7 — AMBULANCE SAFETY

Ambulance safety is a top priority. Every one of our emergency vehicle brands strives to meet AND exceed federal safety standards. From airbag systems to seatbelt harnesses, from impact walls to extensive testing, every manufacturer puts safety first to protect patient and crew. And of course, our vehicles are among the safest because of Reason #6.

#8 — REV REMOUNT CENTER

REV has opened a 200,000-square-foot ambulance remount center in Jefferson, N.C. The facility is taking AEV and Horton remounts and will soon accept other ambulance remounts. Featuring its own paint facility and production line, the center can do chassis remounts, body repairs and box upgrades, and the center has its own dedicated sales and engineering team.

#9 — PARTS, SERVICE + FINANCE

Through REV Group, these ambulance manufacturers offer robust parts, service and finance programs. The company has 12 regional technical centers throughout the United States for emergency vehicle service, and REV Parts offers one of the nation's most innovative dealer parts programs with tiered benefits. Meanwhile, [REV Financial Services](#) offers flexible financing with competitive rates, including vehicle leasing or a no down payment structure.

#10 — REV GROUP BACKING

And last but not least, each ambulance manufacturer is supported by REV Group, a world-class organization that is committed to connecting and protecting communities with a lineup of bus, emergency, mobility and recreation vehicles. Few ambulance manufacturers in the industry have the support of a \$2+ billion manufacturer of specialty vehicles. These manufacturers do.
