

REV GROUP FIRE DIVISION - KME - INTRODUCES PRO™ SERIES RESCUE PUMPER FEATURING ERGONOMICALLY ENGINEERED CONTROL PANEL

Aug. 31st, 2017

MILWAUKEE--(BUSINESS WIRE)-- REV Group (NYSE:REVG), a \$2.4 billion manufacturer of industry-leading specialty vehicle brands and leading provider of parts and services, announced today the launch of the KME PRO™ Series Rescue Pumper – a multi-purpose response vehicle – featuring a newly engineered operator panel with ergonomically designed manual controls, increased pump operator safety features and ultimate equipment carrying capacity.

The KME PRO™ Series packs a 1,500 GPM single stage pump with a 750-gallon water tank and 25-gallon foam cell with provision for foam system installation. The 204" Extra-Long PRO™ body is constructed of 3/16" aluminum, equipped with roof compartments, stokes basket storage, Lock-N-Load™ hose bed cover and roll-up doors, as well as backboard and pike pole storage.

The benefits of the new PRO™ Rescue Pumper configuration include:

- Ergonomically engineered manual control panel – new design with vertical swing and push-pull handles reduces complexity, increases reliability, optimizes operator pump training time and is overall easier to use – resulting in significantly increased operator efficiency and reduced cost of ownership
- Relocated pump operator connections – positioned adjacent to the pump operator, provides safer operator area
- Redesigned service access – allows easy access to the pump from both sides of body without lifting the cab
- 200" Wheelbase – provides maneuverable turning radius to operate in tight conditions
- 534 cubic feet of compartment space – capable of carrying the equivalent of a large rescue body full of tools and equipment

"We saw the need for a rescue pumper that offered all the amenities and features for which the PRO™ Series is known, with the added benefits of a control panel design that would improve operator use, safety and serviceability," said Ryan Slane, Pumper/Tanker Product Manager, KME. "By offering the PRO™ Series with the new manual control configuration, we are able to provide a solution that simplifies operation and provides lower cost of ownership."
